Logging in MobileFirst hybrid applications (JavaScript)

Logging example for hybrid applications (JavaScript)

Outputs to a browser JavaScript console, LogCat, or Xcode console

```
var MathUtils = function() {
   var logger = WL.Logger.create({pkg: 'MathUtils'});
   var sum = function(a, b) {
      var sum = a + b;
      logger.debug('sum called with args ' + a + ' and ' + b + '. Returning ' + sum)
;

      return sum;
   };
}();
```

API calls for specific tasks

Log capture is enabled by default. To turn log capture on or off:

`WL.Logger.config({capture: false})`

The default capture level is DEBUG in development and FATAL in production. To control the capture level (verbosity):

`WL.Logger.config({level: 'FATAL'})`

Log sending is enabled by default. To turn automatic log sending on or off:

`WL.Logger.config({autoSendLogs: false})`

> For more information about `WL.Logger API`, see the API reference in the user documentation
