

Logging in MobileFirst hybrid applications (JavaScript)

Logging example for hybrid applications (JavaScript)

Outputs to a browser JavaScript console, LogCat, or Xcode console

```
1  var MathUtils = function(){
2    var logger = WL.Logger.create({pkg: 'MathUtils'});
3    var sum = function(a, b){
4      var sum = a + b;
5      logger.debug('sum called with args ' + a + ' and ' + b + '. Returning ' + sum);
6
7      return sum;
8    };
9  }();
```

API calls for specific tasks

Log capture is enabled by default. To turn log capture on or off:

```
WL.Logger.config({capture: false})
```

The default capture level is DEBUG in development and FATAL in production. To control the capture level (verbosity):

```
WL.Logger.config({level: 'FATAL'})
```

Log sending is enabled by default. To turn automatic log sending on or off:

```
WL.Logger.config({autoSendLogs: false})
```
