

Sending Push Notifications

fork and edit tutorial (<https://github.com/MobileFirst-Platform-Developer-Center/DevCenter/>) | report issue (<https://github.com/MobileFirst-Platform-Developer-Center/DevCenter/issues/new>)

teach how to send push notifications: 1. how to handle tokens for added security 2. by tag/broadcast, 3. to specific user (authentication)

Overview

1. Sending a push notification with a java adapter
2. Sending a push notification with a javascript adapter
3. Sending a push notification from the console
4. Sending a push notification using REST API (show the available options through Swagger?)
