

# Logging in MobileFirst Cordova applications (JavaScript)

## Logging example for hybrid applications (JavaScript)

Outputs to a browser JavaScript console, LogCat, or Xcode console.

```
var MathUtils = function(){
  var logger = WL.Logger.create({pkg: 'MathUtils'});
  var sum = function(a, b){
    var sum = a + b;
    logger.debug('sum called with args ' + a + ' and ' + b + '. Returning ' + sum);
    return sum;
  };
}();
```

## API calls for specific tasks

Log capture is enabled by default. To turn log capture on or off:

```
WL.Logger.config({capture: false})
```

The default capture level is DEBUG in development and FATAL in production. To control the capture level (verbosity):

```
WL.Logger.config({level: 'FATAL'})
```

Log sending is enabled by default. To turn automatic log sending on or off:

```
WL.Logger.config({autoSendLogs: false})
```

For more information about `WL.Logger` API, see the API reference in the user documentation
