

Setting up the iOS development environment

fork and edit tutorial (<https://github.ibm.com/MFPSamples/DevCenter/tree/master/tutorials/en/foundation/7.1/setting-up-your-development-environment/setting-up-the-ios-development-environment.html>) | [report issue](#)

(<https://github.ibm.com/MFPSamples/DevCenter/issues/new>)

Overview

Prerequisite: If you intend to use IBM MobileFirst Platform Studio or CLI to develop your application, first read the Setting up the MobileFirst development environment ([../setting-up-your-development-environment/setting-up-the-mobilefirst-development-environment/](#)) tutorial.

This tutorial explains the steps that a developer needs to follow in order to be able to develop and test iOS applications. These steps include registering at Apple Developer and installing Xcode.

Registration

Register as an iOS developer.

To do so, visit the Apple Registration Center website (<https://developer.apple.com/register/index.action>).

Download the latest development tools and SDKs.

iOS Apps

Mac Apps

Xcode

Become a member.

Enroll in an Apple Developer Program and get everything you need to develop and distribute your apps.

[Learn more >](#)

As a company, you need to plan additional configuration to invite your developers, manage your devices, certificates, provisioning profiles, and more. To learn more, see visit the Apple Developer support website (<https://developer.apple.com/support/>).

Development

In addition to registering as an iOS developer, you must install and use Xcode (<https://developer.apple.com/xcode/>) to be able to compile the iOS project.

Xcode is an IDE which you can use to:

- Manage your test devices
- Use the iOS simulator
- Install apps on iOS devices
- Debug, test performance, and more

For more information, visit the Apple Developer website (<https://developer.apple.com/>).
