

Previewing your application on Mobile Web and Desktop Browser

fork and edit tutorial (<https://github.ibm.com/MFPSamples/DevCenter/tree/master/tutorials/en/foundation/7.0/hello-world/previewing-application-mobile-web-desktop-browser.html>) | report issue (<https://github.ibm.com/MFPSamples/DevCenter/issues/new>)

Overview

Prerequisite: Make sure to read [Previewing the web resources of your application](#) ([../../hello-world/previewing-applications-web-resources/](#)).

This tutorial covers the following topics.

- Mobile Web and Desktop Browser environment specifics
- Previewing the application in the Mobile Web Simulator
- Running the application in a physical device

Mobile Web and Desktop Browser environment specifics

The Mobile Web and Desktop Browser environments have an additional file, `worklight.manifest`, which is a cache manifest file that allows you to manage and edit the contents of the application cache.

Previewing the application in the Mobile Web Simulator

CLI

From a terminal window, use the `mfp console` command to open MobileFirst Conosle.

MobileFirst Studio

The desktop browser web page is, in fact, a web page, and thus it is not displayed in the Mobile Browser Simulator. Instead, a new tab opens up and presents the web page.

Running the application in a physical device

To get the URL of a mobile web application:

1. Browse to the **Mobile Web Application** environment in the MobileFirst Operations Console (../hello-world/mobilefirst-console/).
2. Copy the regular or shortened URL from the pop-up window, or use the QR code.

To provide a shortened URL, provide your `bit.ly` account username and password in the `worklight.properties` file.

3. Enter the shortened URL in the mobile browser of your device.

The screenshot shows the MobileFirst Operations Console interface. The top navigation bar includes 'MobileFirst Operations Console', 'Analytics Console', and 'Hello, admin'. The left sidebar shows 'Runtimes' with 'HelloWorldProject' selected. The main content area displays 'HelloWorldProject > HelloWorld' with a 'Delete application' button. Below this, the 'HelloWorld' application is shown with a 'Mobile Web Application' tab selected. The application status is 'Active', version '1.0', and build time 'Jun 29, 2015, 3:34 PM'. A QR code and a URL are provided for deployment to a physical device. The URL is `http://9.148.225.140:10080/HelloWorldProject/apps/services/www/HelloWorld/mobilewebapp/`. A message states: 'A bit.ly shortened URL is not available, because the bit.ly service is not configured. Add bitly.username and bitly.apikey credentials to worklight.properties file.'
