

# Logging in iOS Applications

fork and edit tutorial (<https://github.ibm.com/MFPSamples/DevCenter/tree/master/tutorials/en/foundation/8.0/analytics/remote-controlled-client-side-log-collection/ios.md>) | report issue (<https://github.ibm.com/MFPSamples/DevCenter/issues/new>)

## Logging example for native iOS (Objective-C)

Outputs to Xcode console ```objective-c

### import "OCLogger.h"

- (int) sum:(int) a with:(int) b{ int sum = a + b; OCLogger\* mathLogger = [OCLogger getInstanceWithPackage:@"MathUtils"]; NSString\* logMessage = [NSString stringWithFormat:@"sum called with args %d and %d. Returning %d", a, b, sum]; [mathLogger debug:logMessage]; return sum; } ``` ### API calls for specific tasks Log capture is enabled by default. To turn log capture on or off:

```
OCLogger.setCapture(NO)
```

The default capture level is DEBUG in development and FATAL in production. To control the capture level (verbosity):

```
OCLogger.setLevel(OCLogger_DEBUG)
```

Log sending is enabled by default. To turn automatic log sending on or off:

```
OCLogger.setAutoSendLogs(NO)
```

For more information about `objective-c0CLogger API`, see the API reference in the user documentation
