

Quick Start demonstration

The purpose of this demonstration is to make you experience an end-to-end flow where the MobileFirst Platform Foundation SDK for Windows 8 Universal is integrated into a Visual Studio project and used to retrieve data by using a MobileFirst adapter.

To learn more about creating projects and applications, using adapters, and lots more, visit the Native Windows 8 Development (../) landing page.

Prerequisite: Make sure that you have installed the following software:

- MobileFirst Platform command line tool (download (file:///home/travis/build/MFPSamples/DevCenter/_site/downloads))
 - Visual Studio 2013
-

1. Create a MobileFirst project and adapter.

- Create a new project and Windows 8 Universal framework/server-side application entity.

```
mfp create MyProject
cd MyProject
mfp add api MyWin8Universal -e windows8
```

- Add an HTTP adapter to the project.

```
mfp add adapter MyAdapter -t http
```

2. Deploy artifacts to the MobileFirst Server.

- Start the MobileFirst Server and deploy the server-side application entity and adapter.

```
mfp start
mfp push
```

3. Create a Visual Studio Windows 8 Universal project.

4. Add a reference to the following libraries in your project:

- worklight-windowsphone8.dll
- Newtonsoft.Json.dll
- SharpCompress.dll

5. Implement the MobileFirst adapter invocation.

- ```
WLResourceRequest request = new WLResourceRequest("/adapters/MyAdapter/getStories", "GET");
request.setQueryParameter("params", "technology");
MyInvokeListener listener = new MyInvokeListener();
request.send(listener);
```
