Handling Push Notifications in Android

Overview

In this tutorial, you will be learning how to handle push notification for Android applications.

Agenda

- · Notifications configuration
- Notifications API
- · Handling a push notification
- Handling a secure push notification

Notifications Configuration

- 1. Create new app in Android Studio
- 2. Add classpath 'com.google.gms:google-services:2.0.0-alpha3' to Project Gradle
- 3. Add compile 'com.google.android.gms:play-services-gcm:8.4.0' to app gradle
- 4. Add compile 'com.squareup.okhttp:okhttp:2.6.0' to app gradle
- 5. Add apply plugin: 'com.google.gms.google-services' to app gradle
- 6. Add google-services.json to app folder
- 7. Add all mfp core jars (bcprov, android sync, worklight-android) to libs folder and the mfpclient.properties to assets folder
- 8. Add mfp push sdk (ibmmobilefirstplatformfoundationpush) compile dependency in app gradle compile group: 'com.ibm.mobile.foundation', name:'ibmmobilefirstplatformfoundationpush', version:'1.0.0', ext: 'aar', transitive: true
- 9. Copy ibmmobilefirstplatformfoundationpush-1.0.0.aar (from halpert Electra DevOps Latest integration build) to \extras\google\m2repository\com\ibm\mobile\foundation\ibmmobilefirstplatformfoundationpush\1.0.0\ibmmobilefirstplatformfoundationpush-1.0.0.aar Remove libs folder from the aar. Note: This step is not required once the lib gets to maven central/jcenter. Just need to add mavenCentral()/jcenter() in app gradle.
- 10. Add the push required configuration in AndroidManifest.xml (Refer the sample)
- 11. Use the Push SDK APIs in your application (Refer the sample)
