# Windows 8.1 Universal and Windows 10 UWP end-toend demonstration

#### **Overview**

The purpose of this demonstration is to experience an end-to-end flow where an application and an adapter are registered using the MobileFirst Operations Console, an "skeleton" Visual Studio project is downloaded and edited to call the adapter, and the result is printed to the log - verifying a successful connection with the MobileFirst Server.

#### Prerequisites:

- Configured Visual Studio 2013/5
- MobileFirst Developer CLI (download (file:////home/travis/build/MFPSamples/DevCenter/\_site/downloads))
- Optional Stand-alone MobileFirst Server (download (file:///home/travis/build/MFPSamples/DevCenter/\_site/downloads))

#### 1. Starting the MobileFirst Server

If a remote server was already set-up, skip this step.	

From a **Command-line** window, navigate to the server's **scripts** folder and run the command: start.bat.

### 2. Creating an application

In a browser window, open the MobileFirst Operations Console by loading the URL: http://your-server-host:server-port/mfpconsole. If running locally, use: http://localhost:9080/mfpconsole (http://localhost:9080/mfpconsole). The username/password are admin/admin.

Click on the "Create new" button next to <b>Applications</b> and select the desired plate version values.	
	olatform, identifier and
2. Click on the <b>Get Starter Code</b> tile and select to download Windows 8.1 or Window	dows 10 Starter Code.

### 3. Editing application logic

- 1. Open the Visual Studio project.
- 2. Select the solution's **MainPage.xaml.cs** file and paste the following code snippet:

IWorklightClient _newClient = WorklightClient.CreateInstance();
StringBuilder uriBuilder = <b>new</b> StringBuilder().Append("/adapters/javaAdapter/users/world");
WorklightResourceRequest rr = _newClient.ResourceRequest(uriBuilder.ToString(), "GET");
WorklightResponse resp = await rr.Send();
Debug.WriteLine("Response is " + resp.ResponseText);

### 4. Creating an adapter

1. Click on the "Create new" button next to **Adapters** and download the **Java** adapter sample.

If Maven and MobileFirst CLI are not installed, follow the on-screen Setting up your environment instructions to install.

2. From a <b>Command-line</b> command:	window, navigate to the adapter's Maven project root folder and run the
mfpdev adapter build	
s. When the build finishes,	run the command:
mfpdev adapter deploy	
If using a remote Mobile	eFirst Server, run the command:

## 5. Testing the application

1. In Visual Studio, click on the **Start Debugging** button.

mfpdev adapter deploy Replace-with-remote-server-name
