Logging in iOS Applications

fork and edit tutorial (https://github.ibm.com/MFPSamples/DevCenter/tree/master/tutorials/en/foundation/8.0/analytics/remote-controlled-client-side-log-collection/ios.md) | report issue (https://github.ibm.com/MFPSamples/DevCenter/issues/new)

Logging example for native iOS (Objective-C)

Outputs to Xcode console

```
#import "OCLogger.h"
+ (int) sum:(int) a with:(int) b{
  int sum = a + b;
  OCLogger* mathLogger = [OCLogger getInstanceWithPackage:@"MathUtils"];
  NSString* logMessage = [NSString stringWithFormat:@"sum called with args %d and %d. Returning %d",
  a, b, sum];
  [mathLogger debug:logMessage];
  return sum;
}
```

API calls for specific tasks

Log capture is enabled by default. To turn log capture on or off:

```
OCLogger.setCapture(NO)
```

The default capture level is DEBUG in development and FATAL in production. To control the capture level (verbosity):

```
OCLogger.setLevel(OCLogger DEBUG)
```

Log sending is enabled by default. To turn automatic log sending on or off:

OCLogger.setAutoSendLogs(NO)

For more information about objective-c0CLogger API, see the API reference in the user documentation
