Windows 10 UWP end-to-end demonstration

Overview

The purpose of this demonstration is to experience an end-to-end flow where an application is quickly created using the MobileFirst Operations Console and connectivity is verified with the MobileFirst Server.

Prerequisites:

- Configured Visual Studio 2015
- MobileFirst developer CLI (download (file:///home/travis/build/MFPSamples/DevCenter/_site/downloads))
- Optional Stand-alone MobileFirst Server (download (file:///home/travis/build/MFPSamples/DevCenter/_site/downloads))

1. Starting the MobileFirst Server

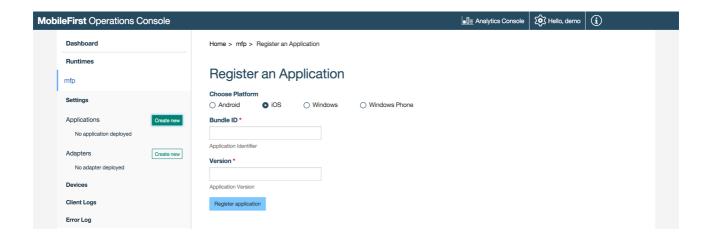

If a remote server was already set-up, skip this step.

From a **Command-line** window, navigate to the server's **scripts** folder and run the command: start.bat.

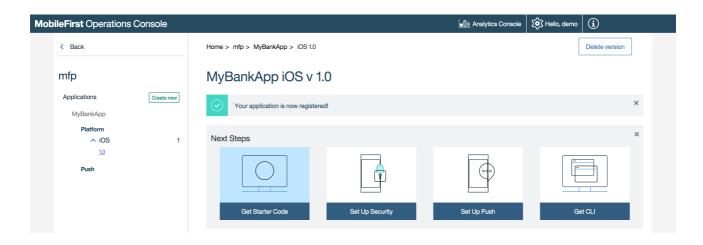

2. Creating an application

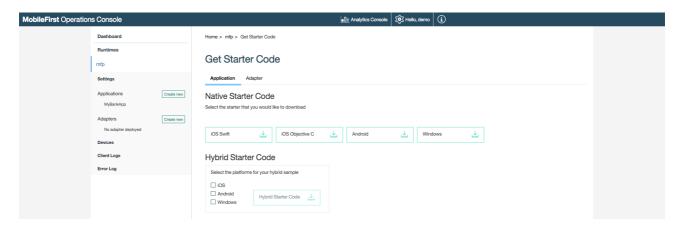

In a browser window, open the MobileFirst Operations Console by loading the URL: http://your-server-host:server-port/mfpconsole. If running locally, use: http://localhost:9080/mfpconsole (http://localhost:9080/mfpconsole). The username/password are admin/admin.

1. Click on the "Create new" button next to **Applications** and select the desired *platform*, *identifier* and *version* values.

2. Click on the **Get Starter Code** tile and select to download the Android Starter Code.

3. Editing application logic

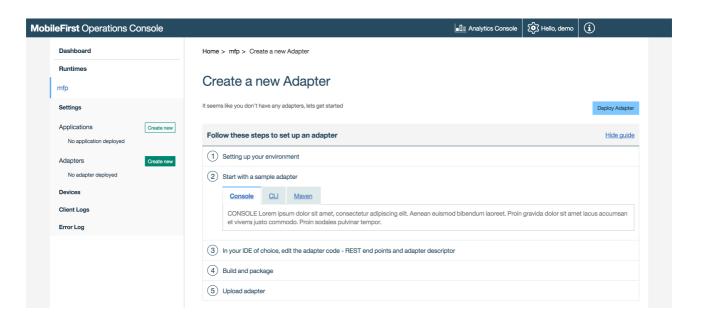

- 1. Open the Visual Studio project.
- 2. Select the solution's **App.xaml.cs** file and paste the following code snippet:

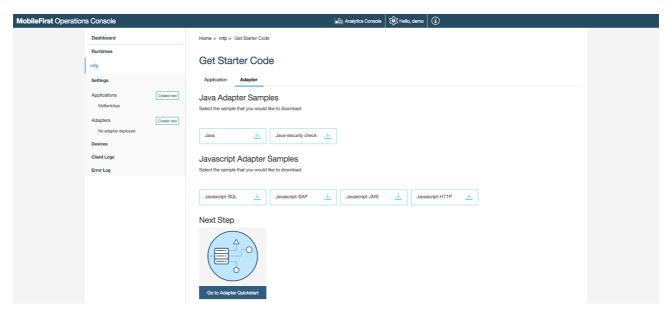

WLResourceRequest code snippet here

4. Creating an adapter

1. Click on the "Create new" button next to **Adapters** and download the **Java** adapter sample.

If Maven and MobileFirst CLI are not installed, follow the on-screen **Setting up your environment** instructions to install.

2. From a **Command-line** window, navigate to the adapter's Maven project root folder and run the command:

mfpdev adapter build

3. When the build finishes, run the command:

mfpdev adapter deploy

If using a remote MobileFirst Server, run the command:

mfpdev adapter deploy Replace-with-remote-server-name

5. Testing the application

1. In Visual Studio, click on the Start Debugging button.

Next steps

Learn more on using adapters in applications, and how to integrate additional services such as Push Notifications, using the MobileFirst security framework and more:
