MobileFirst CLI

IBM MobileFirst Platform Foundation provides a command-line interface tool to manage MobileFirst Servers, configure MobileFirst applications, and create, build, deploy and test MobileFirst adapters. The CLI lets you use your preferred code editor or alternative IDEs to implemet applications and adapters.

To learn more about the MobileFirst CLI, see the tutorial: Using CLI to manage MobileFirst artifacts ()../../using-cli-to-manage-mobilefirst-artifacts/)

To download the MobileFirst CLI, visit the downloads (/downloads/) page.

MobileFirst Operations Console

TODO: add information

System requirements

The MobileFirst developer tools are supported on the following operating systems: Windows, Apple OS X and Linux.

The MobileFirst Operations Console is a web application and is supported in modern browsers: Internet Explorer 10+, Chrome, Safari and Firefox.
